AQUACULTURE

Does sustainably farmed fish exist – and if so, can you label it?

Lunch seminar with follow-up discussion 2019-10-01

Aquaculture is among the fastest growing food industries in the world and has an important role to play in feeding the increasing human population. Around 50 percent of all fish consumed globally is farmed. Sweden has its own production, but the vast majority of the fish we eat is imported. Regardless of whether the fish is farmed in Sweden or elsewhere, the production should be sustainable and environmentally friendly. For consumers it might be difficult to know what kind of farmed fish to buy to make a sustainable choice, and to know what the different sustainability labels mean.

Welcome to a lunch seminar and discussion about fish farming and sustainability certifications. Meet and listen to both SLU aquaculture researchers and representatives from KRAV, WWF, ASC, and Svenskt Sigill. The aim of the seminar is to:

- increase the knowledge about which fish farming practices and systems that are used in Sweden today and which to come in the near future
- increase the knowledge about certifications and labels for environmentally friendly and sustainably farmed fish that can be found on fish products in Swedish food stores
- create a dialogue between researchers, the food industry and certification organisations/NGOs

Target group: All employees and students at SLU as well as interested consumers and business representatives outside SLU are most welcome!

Where: Lennart Kennes sal, Biocentrum, Ultuna, Uppsala

Streaming: The first part of the seminar is streamed online. Link at www.slu.se/epokseminarium

NOTE! Register before 25 September at www.slu.se/epokseminarium (Registration is only mandatory if you want lunch or attend the follow-up discussion.)

Arranged by: SLU Ekologisk produktion och konsumtion & SLU Aquaculture

Programme

11.30 A light lunch is served for registered participants

12.00 Lunch seminar

- Introduction by moderator
- Fish farming in Sweden: current status and future prospects, Markus Langeland, SLU
- Short presentations and panel discussion with Anita Falkenek, KRAV; Inger Melander, ASC; Maja Forssell, Svenskt Sigill; Karin Glaumann, WWF

13.00 Short break

13.05 Follow-up discussion

15.00 End
